

FURNITURE  
INNOVATION

# G&D. Evolving constantly for 30 years

---

## **THE EXPERIENCE OF THE CRAFTSMAN AND A GLOBAL VISION**

We began life in Pesaro in 1983, in one of the most important furniture districts in Italy, indeed the world. We are a business, but first and foremost we're craftsmen, and proud of it: in close contact with the raw materials, with a direct relationship with our customers, paying the utmost attention to detail.

## **SPECIALISED IN DOORS FOR KITCHEN AND BATHROOM UNITS**

We used to make all sorts of products, and we were good at it; but we wanted to become even better. That's why, in 1990, we decided to specialise in doors for kitchen and bathroom units. We've come a long way since then; keeping an eye on innovation, staying a step ahead of trends and moving to bigger premises so as to have more space for our products and better serve your needs.

## **PASSION AND TECHNOLOGY, AT YOUR SERVICE**

Process automation, investments in cutting-edge machinery, optimisation of production flows.

# Large-scale production, with an eye on the smallest of details

## FIRST AND FOREMOST, THE RAW MATERIALS

The door is the most elaborate part of a unit, and the quality of a door depends largely on the materials. This is why we are always in search of new solutions, materials or combinations of highly innovative materials able to guarantee you a truly unique product in line with your requests – indeed a step ahead of them.

## WE OPTIMISE, YOU SAVE

Today's technology allows us not only to improve the quality of the end product, but also to save time and money. And we make the most of this, thanks to our advanced machinery and the perfect rationalisation of production flows, offering you the best possible prices and supplying goods in the shortest possible time.

## SAFEGUARDING NATURE, TOGETHER

We have confidence in our skills, but we aim to offer you all the guarantees necessary. This is why we are able to boast FSC certification: so you can rest assured the wood we use comes from forests that are managed correctly and responsibly, in keeping with strict environmental, social and economic standards. A joint commitment to the environment.

Il marchio della gestione forestale responsabile

# A world of doors, open to every need

---

## THE IDEAL SOLUTION FOR EVERY UNIT

Modern or classic doors, in clear or frosted glass. Matt, glossy, embossed lacquering. Straight doors, or even curved doors for the most sophisticated of projects. G&D's huge catalogue offers limitless imaginative solutions, in terms of materials, workmanship, shape, thickness, varnishes and colours. Whatever your needs, we have the combination to satisfy them.

## NO LIMITS, CUSTOMISATION IN RECORD TIME

In addition to serial production, we are always pleased to create doors to order, to meet any specific need. Custom-made unit doors can be provided for the contract sector, with no minimum quantity requested. Just send us your autoCAD file, a drawing, or even simply the measurements of the door you require, and our technical staff will be happy to study and complete the project. Maximum flexibility, in record time.

## DIFFERENT COMPANIES, THE SAME UNIQUE SERVICE

Large, medium and small businesses, wholesalers and resellers. Whether you're a representative of a major chain, a furniture-making company or a furnishing accessories distributor, G&D is the perfect partner for you, thanks to our production capacity, experienced staff and distinctive approach, able to combine craftsmanship with process automation.

# Cutting

*Perfect precision*

Using small or large workpieces, G&D machinery is able to cut panels of between 4 and 60 millimetres thick.

# Pantography

*Maximum versatility*

Cutting, piercing and engraving on panels. G&D has several pantograph machines that can be programmed with extreme rapidity and are able to directly import technical design files. If you have an autoCAD file, send it to us here at G&D and your instructions will be carried out to perfection.

# Polyester coating

*Endless resistance*

Cupboard and cabinet doors are subjected to heavy stress during daily use. The application of a polyester base coat is essential to ensure your doors are built to last and to stand up to scratching and chemical agents. At G&D, this important process is carried out using an automated line. Large volumes, excellent results, and a satisfied customer ready to come back.

# Sandpapering

*Perfect adherence*

To ensure the varnish adheres perfectly to the wood, G&D sandpapers the surfaces on an automatic line, while edges and curves are smoothed semi-automatically. Man and machine working in perfect harmony.

# Varnishing

*Perfect appearance*

Matt, glossy and embossed lacquering. Whatever your requirements, G&D uses a manual varnishing machine for curved doors and a mechanical machine for straight doors. Thus, once fired in two kilns at 50 and 30 degrees, the panel acquires excellent chemical and physical resistance.

# Quality control

*Painstaking attention*

Before they go on the market, our doors are checked by hand, one by one, so customers can be sure of receiving a superior-quality product. G&D quality control has extremely strict rules to follow, with specialised staff taking care to ensure quality standards are complied with. No compromises, no distractions. We guarantee only the best, ready for labelling and packaging.

# Labelling and packaging

*Maximum precision*

---

G&D is one of the few companies on the market able to boast an advanced, reliable labelling system, which prints your barcode directly onto the product. After this operation, the products move onto an automatic packaging system. This process is able to guarantee maximum precision, and the doors are now ready for delivery.
